## Introduction
Key questions related to the geomorphology of this excursion
Princess of Ukok

## Part I. Upper Biya River valley and the Teletskoye Lake
NE Altai Regional settings and Quaternary history: General overview
Stop B1. Former glacial-dammed lake in the Yogach valley
Stop B2. Former alluvial-dammed lake in the Turachak valley
Stop B3. Teletskoye Lake and lacustrine terrace at Yaylyu
Geomorphic history of the Teletskoye Lake – Biya valley system: synthesis

## Part II. Middle Katun River valley
Brief introduction
Stop K1. Catafluvial deposits of the high (Inya) terrace in the vicinity of the Bolshoi Yaloman River
Stop K2. Boulder field at km 702
Stop K3. High terraces of the Katun and Injushka Rivers at the Inya village
Stop K4. Composition and geochronology of the low (Saldzhar) terrace at the Chuya River confluence

## Part III. Middle Chuya River valley, Kuray and Chuya Basins
Stop C1. Early Holocene seismic fall and dammed lake formation at the Sukhoi brook
Stop C2. Late Pleistocene glacial damming of Chuya at Kuektanar tributary valley
Stop C3. Lower Chagan-Uzun river: the Late Pleistocene maximal glacial advance
Stop C4. Beltir village: consequences of the year 2003 seismic hazard
Stop C5. Earthquake triggered giant landslides in the Taldura valley
Stop C6. Kuray dunes
